Congratulations on the purchase of your new Dust Free® Series 70 “Auto Aire” air purifier. We are confident you will find fresh, healthy air in your vehicle a welcome change from the polluted air that is brought in by your vent system.

The Series 70 combines convenience and high efficiency filtration in a compact package. The Series 70 is constructed of a high impact plastic surface with a metal inner structure. The design incorporates a two speed switch, beverage holders, a directional air flow grille, and a handle. The Series 70 uses three stages of filtration in a design that takes in air from all four sides. Carbon impregnated polyester and medical quality Fiber-Stat™ are used to control fumes, smog, and smoke while electrostatically charged filter media removes particles from the air in car, truck or travel trailer as small as .3 microns. The Series 70 is also available with an optional AC adapter for use in homes and offices.

**SPECIFICATIONS**

**Series 70 Specifications**

- **Dimensions:** 10"L x 7.25"W x 7.75"H  
  25.4 x 18.4 x 19.7 cm
- **Weight:** 4 lbs. (1.8 kg)
- **Power:** 12 volts DC
- **Air Volume:** 80 CFM (2.3 CMM)
- **Options:** AC Adapter
To operate your Series 70 “Auto Aire”:

Note: Unplug the power cord by grasping the plug itself. **DO NOT** pull on the plug itself, doing so will cause the cord wires to disconnect from the plug.

1. Insert the plug into the cigarette lighter of your car. Or if you're using the AC adapter, into an electrical outlet.
2. If possible, position the Series 70 so it is centrally located.
3. Push switch on top of unit to desired fan speed. For low speed, switch should be in down position. For high speed, switch should be in up position.
4. To turn off unit place the switch in the center position.

To replace or service the media in your Series 70 “Auto Aire”:

1. Set the unit on its end with the handle on top.
2. Grasp electrostatic media and gently pull away from unit, and wash with light soapy water.
3. Grasp black carbon and white media and pull away from unit as in step 2.
5. Starting at one end of the new media, place end under handle retainer. White media on the inside closest to motor, black carbon media to the outside.
6. Wrap media around unit completely, placing other end of media under the other side of the handle retainer. **NOTE:** It is easier to install the media with the unit on its side.
7. Place electrostatic media in unit in the same manner, gently slipping media into lip of top and bottom of unit.
