- Body Shops
- Copy Centers
- Warehouses
- Factory Sites
- Veterinary Clinics
- Machine Shops
- Print Shops
- Many More

The Dust Free[®] Work Shop Air Cleaners are designed with flexibility in mind, making it perfect for many different applications.

The units employ high velocity blowers that are capable of cleaning the air in large rooms and spaces. Pre-filters and V-Bag main filters are used to ensure that the air is cleaned to OSHA standards. The Series 1500 is also available with charcoal filters for odor control.

Each unit is constructed of high quality galvanized steel and has a 5-year limited warranty.

GENERAL DESCRIPTION

The Dust Free[®] work shop air cleaner systems are designed to capture particles from the air under extreme conditions. All systems employ a dual-stage filtration method using a pre-filter and a V-Bag main filter. An optional charcoal filter for the Series 1500 will remove up to 200 odors.

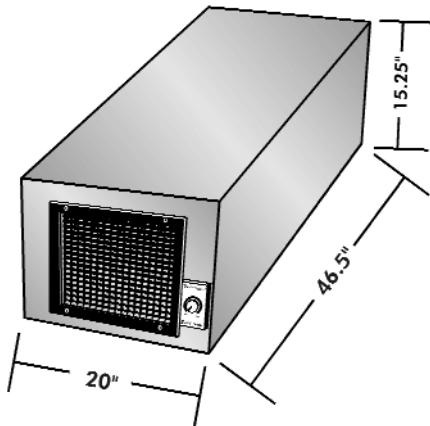

The air cleaners can be hung from a ceiling or set on a table or saw horses. This flexibility allows them to be placed near the source of the contamination.

The units are constructed of 20-gauge galvanized steel and are durable enough to withstand the rigors of a work shop.

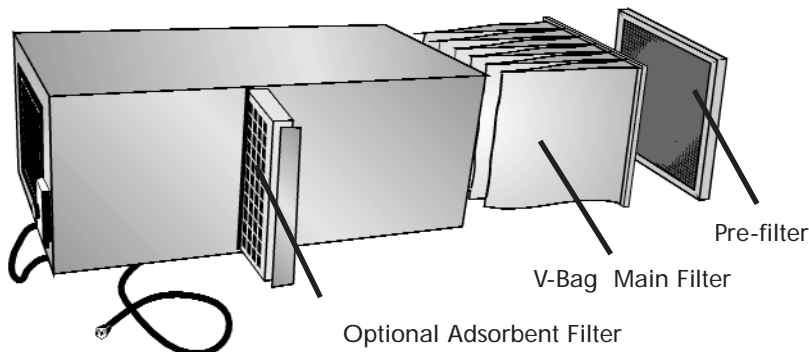

EASE OF OPERATION

The Dust Free[®] Series 1500 air cleaner is simple to operate and requires little maintenance. Simply plug in the power and turn it on. No tools are required to change the filtration media in the unit.
